

Alumet® Supply

Aluminum Sheet and Coil Specialists

Painted • Anodized • Mill Finish

ALUMET ACM SIGN PANELS

Aluminum Composite Material (ACM) Sign Panels are composed of a thermoplastic core of low density polyethylene, bonded to two sheets of aluminum using a sophisticated bonding process involving chemical adhesives and high temperatures. The painted surface of the aluminum sheet is coated with a wax free high performance polyester coating. The painted surface is protected with a strippable masking to prevent scratching.

Alumet Aluminum Composite Panels are now a UL compliant sign accessory component.

ACM SIGN PANEL FEATURES
