

RIGHT FROM THE START

Quality Pre-finished Panel. Ideal for Flatbed Digital Print Projects.

If you're a graphics professional producing any type of panel project, you'll want FINNISHED™. It will not only simplify your job - it looks great, has a long life (lasts up to five years), is durable, has its own structural integrity, and can be used for either interior or exterior applications.

The FINNISHED™ panel arrives at your door completely ready, so you spend less time prepping, and more time producing. No priming, no painting, no sanding, and no filling are required.

FINNISHED™ is a rigid yet easily machinable plywood substrate made from 100% Birch (hardwood) veneers with faces that are ideal for digital print projects as well as screen printing and vinyl applications. Panel faces are produced by applying a specially formulated melamine film to the substrate under both heat and pressure. The result is a smooth, semi-gloss surface that maintains exceptional color value, and is resistant to moisture, chemicals, and abrasion. All edges are sealed with an acrylic industrial coating to prevent moisture from entering the substrate.

The FINNISHED™ panel is manufactured by Koskisen in Jarvela, Finland where harsh conditions produce a short growing season. Tree growth is slow and annual rings are tight, resulting in wood that is strong, homogeneous and of consistently high quality. Koskisen has been dedicated to producing exceptional quality products since 1931. The FINNISHED panel conforms to quality standard EN ISO 9001 and environmental standard EN ISO 14001.

Features

- Specially formulated melamine film, adhered to face and back, resists moisture, abrasion, and maintains exceptional color.
- Multi-layered Finish Birch core adds stability, making it an ideal choice for flatbed digital printers for use with a solvent-based cured ink system.
- Edges are sealed with an acrylic industrial coating to prevent moisture from entering substrate.
- Extremely rigid and durable, panel is suitable for indoor and outdoor applications.
- Panel can be cut or machined using normal woodworking tools, saws, or routers. Use sharp tools to prevent edges from chipping.

Applications:

- Point-Of-Purchase Displays
- Trade Show Exhibit Panels
- Monument Signs
- Display Panels
- Rigid Banners
- Museum Backdrops & Dividers
- Amusement Park Panels
- Sign Boards
- Directional Signage
- Sandwich Boards
- Post & Panel Signs
- Menu Boards
- Digital Output Mounting Boards
