LED Modules

AT A GLANCE

- Available in Red, Orange, Amber, Green, Blue and AgiLight Sign White
- TuffRayz - Three high brightness LEDs per module (2 modules per foot)
- TuffRayz JR - Two high brightness LEDs per module (3 modules per foot)
- $V_i = 12\text{V DC}$
- Low heat for extended life
- Solder-free connections for maximum strain relief
- Waterproof potting protects all circuitry and connections
- IP66 certified for wet location
- Packaged in easy-to-use 25 foot trays
- Operating environment: -40 to 60C
- Storage temperature: -40 to 90C
- 120° beam angle

Wind, rain, ice and humidity are no match for AgiLight's new TuffRayz LED modules. Durable and extremely weather-resistant, TuffRayz provide an affordable, energy-efficient channel letter lighting solution for indoor and outdoor signage. Make sure your signs shine through any forecast.

ULTRA DURABLE

Don't lose one more channel letter or sign to the elements. Heavy-duty and essentially weather-

proof, TuffRayz are extremely durable and hold-up in the most extreme weather conditions imaginable, including heat, cold and moisture. The module features a protective molded body and fully potted protection of the circuitry and connections for wet location use.

ULTRA SIMPLE

Unlike traditional rectangular modules, TuffRayz streamlined pod-like design allows for quick and easy installation. The oval-shaped modules smoothly flow over work surfaces and into place in letters and signs. TuffRayz are also color coded for quick and easy identification of the LED's color. Installation is a breeze with a choice of mounting flanges for mechanical fastening or 3M™ VHB adhesive tape.

ULTRA VIVID

Available in the industry's most desired colors, TuffRayz modules come in a red, orange, amber, green, blue, and a very clean, bright white called "AgiLight Sign White." These are also the brightest entry-level LED modules available.

ULTRA EFFICIENT

In addition to delivering up to 30 percent greater brightness than other standard LED channel letter solutions—and being one of the best values around—TuffRayz provides longer runs than most competitive products (up to 60 linear feet per 60-watt power supply). TuffRayz run on 12V DC power and are fully compatible with all AgiLight LED products and power supplies.
